Science Scripture & Salvation Broadcast Update

Thank you to everyone who was a part of sponsoring the Institute for Creation Research’s Science, Scripture & Salvation radio program for the last two years. Individual contributions did not always meet the monthly cost, so a number of times DSA had to make up the difference. With the downturn in the economy it is not feasible to continue at this time. Though direct feedback response was limited, be assured that the Lord always blesses His message and we can be confident He has used this program for His glory.

You can still hear these excellent programs on your computer, I-Pod, or MP3 player at: http://www.icr.org/radio. Just select a topic and click on “Listen Now.”

Will Mutations Rescue GM?

by Tom Heinze

Mutations, random accidental changes which are passed on to the offspring by heredity, are claimed by evolutionists to be the reason for the many kinds of living things in the world around us. If they are right, here is a great new way for General Motors to get out of its financial bind: Instead of designing new cars, let accidents caused by collisions determine the shape of the new GM models. One year they could run one off a cliff and build all of that years models like that one. Another year they could flip one over the median into the face of oncoming traffic. Each would be changed by an accidental mutation that would redesign the car. What a glorious discovery for the directors of General Motors! Or not! In fact, most of you are thinking, “That’s stupid!” and are about to quit reading this idiotic article.

I don’t blame you. That is exactly what we should do with articles that claim that random mutations were responsible for developing the living things around us. Evolutionists claim that hummingbirds were not designed, but developed from normal birds which in turn, had mutated from a small animal that glided down from the tree tops. Even many evolutionists are not able to swallow these claims. Some say, “It happened that way because God directed the mutations.” The orthodox evolutionist position, however, is that living things have resulted from completely unguided random mutations.

In spite of the apparent authority of the schools and textbooks that promote this position, the heads of most people are screwed on too well to believe it. Even though evolution is popular, they take a more reasonable position. When they see a bicycle, they know that the reason it looks designed is because it was. In fact, reasonable people know that everything parked at the side of their street because it was. In fact, reasonable people know that everything parked at the side of their street because it was. Even though evolution is popular, they take a more reasonable position. When they see a bicycle, they know that the reason it looks designed is because it was. In fact, reasonable people know that everything parked at the side of their street because it was. Even though evolution is popular, they take a more reasonable position. When they see a bicycle, they know that the reason it looks designed is because it was. In fact, reasonable people know that everything parked at the side of their street because it was.

Then, when they see a bat at twilight nailing mosquitoes at break-neck speeds with pinpoint accuracy, most will think the bat was designed too. The idea goes well with the fossils. The ear-

ing body of evidence that our solar system is a spe-

cial and supernaturally created place.

The wealth of new data in recent years has been causing secular theories and models in astronomy to rapidly change. This is a testimony of their failure to make adequate explanations and accurate predictions, two of the most important cornerstones for scientific theories. The most widely-accepted ideas about the origin and development of our solar system are currently riddled with holes, as many secular scientists openly admit. In our January meeting, speaker Brandon Church will examine these theories, and expose the tremendous problems they have.

As part of our study, Brandon will also lead us on a fascinating and picture-filled tour of the planets and major moons in the solar system, paying special attention to the uniqueness and beauty of each.

This presentation will be an updated version of the one Brandon gave in August of 2007, supplemented by PowerPoint slides. It will also include new calculations on the probability of the amazing precision in the solar system, along with two hand-outs!

This month’s DSA meeting will be held on Saturday, January 17, 2009, from 9 to 11:30 AM. Be sure to join us as we are updated on this subject!

Precision, Probabilities & PowerPoint!

The Solar System: by Chance or Design?

DURING THE PAST FEW DECADES, advanced telescopes and high-tech satellites have opened huge windows of understanding into the worlds that surround us. They have allowed us to study the surfaces (as well as sub-surfaces) of many of the planets, moons, asteroids, and comets that share our local neighborhood. They have even given us evidence for the existence of more than one hundred other planets orbiting nearby stars. Perhaps the most significant result of all this technology is the growing body of evidence that our solar system is a special and supernaturally created place.

The wealth of new data in recent years has been causing secular theories and models in astronomy to rapidly change. This is a testimony of their failure to make adequate explanations and accurate predictions, two of the most important cornerstones for scientific theories. The most widely-accepted ideas about the origin and development of our solar system are currently riddled with holes, as many secular scientists openly admit. In our January meeting, speaker Brandon Church will examine these theories, and expose the tremendous problems they have.

If the snow delayed your plans to get some of these materials—no worries—we have plenty more at the DSA Booktable!

Northwest Creation Conference
Saturday, February 7, 2009
Columbia Conference Center, Holiday Inn Portland Airport
8439 NE Columbia Boulevard • Portland, OR

This upcoming NW Creation Conference will feature speakers Dennis Petersen, Eric Hovind, Dennis Swift and Paul Veit. Register early—call or check website for more details!

Topics at this conference will include:
• The Dangers of Evolution • Fossil Evidence for Creation & the Flood
• The Lies in Your Textbooks • Hi-Tech Pharaohs & Ancient Technology • Stones & Bones, Claws & Jaws • Unlocking the Mysteries of Civilization • The Last Inca Runners & the Dinosaurs

Call: 503-590-8327 • Or check website at: www.creationnw.org

Dennis Petersen, is the founder of the Creation Resource Foundation, and author of Unlocking the Mysteries of Creation. His multimedia seminar by the same name is spellbinding. Petersen is one of the world’s leading authorities on ancient civilizations.

Eric Hovind, the President of Creation Science Evangelism of Pensacola, Florida. Eric is a master communicator presenting facts with humorous wit that will keep you on the edge of your seat. His information arsenal destroys evolution.

Paul Veit, is known as the “Dinopastor”, a paleontologist and creation evangelist, who captivates children & adults with his presentation, Stones and Bones, Claws and Jaws. He is founder of Declare God’s Wonders Creation Ministry, Bridgeton, Maine.

Dr. Dennis Swift, conference host and author of the book, Secrets of the Ica Stones and Nazca Lines: Proofs That Dinosaurs And Man Lived Together, is considered to be the leading authority on dinosaurs and man living together.
